

Medicaid Per Capita Caps = Cuts & Rationing Care

If federal Medicaid funding is changed to a per capita cap system, Illinois will be on the hook for a significantly larger share of Medicaid costs. What this means is that Illinois will have 2 options: **cut Medicaid spending or raise taxes.**

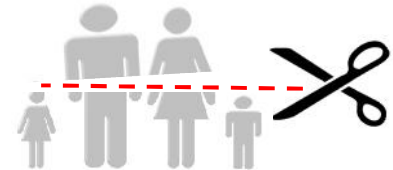

There are only 3 ways to cut Medicaid spending:

Cut Payments to Providers

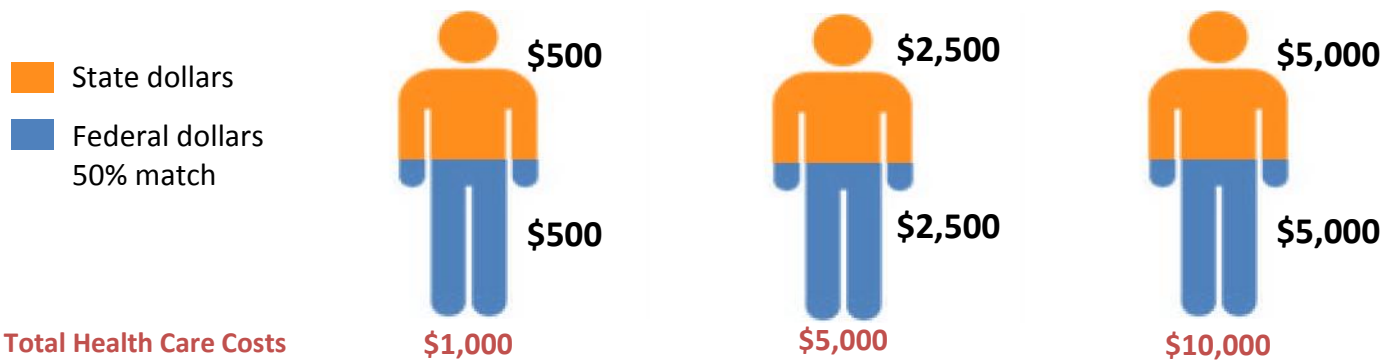

Cut Health Care Benefits

Cut Who is Eligible to Enroll

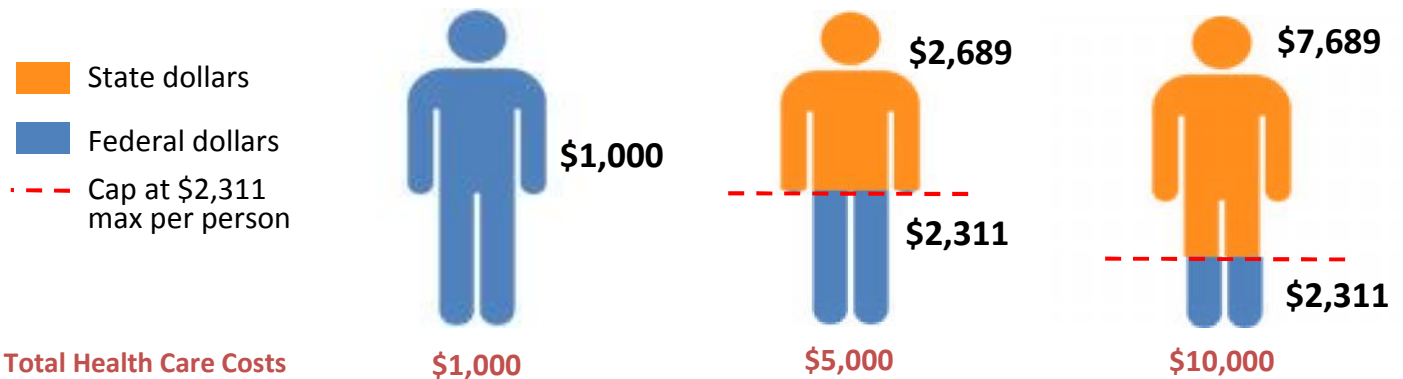

Current Medicaid funding is a state-federal partnership

Currently, the amount of federal Medicaid dollars IL gets is based on the amount of dollars IL spends on Medicaid.

Per Capita Cap system limits federal dollars & Illinois pays more

In this system, federal Medicaid dollars are limited to a specific amount per person enrolled in Medicaid, regardless of the actual costs of the health care services they may need, which means IL pays the balance. Urban Institute estimates IL adult cap at \$2,311.

Under a per capita cap funding system, Illinois will be forced to **dramatically cut Medicaid costs.**

Remember, there are only 3 ways to cut Medicaid spending!

This will mean rationing care to vulnerable populations who need the most expensive services, including children with disabilities and the elderly.
